

## Your Photo On Brushed Aluminum Dibond: A Gold Or Silver Metallic Look

To produce our Direct Print On Brushed Aluminum, your photo is printed straight onto the surface of a gold or silver brushed aluminum Dibond panel. We use UV Fine Art pigments for this modern 7-color print for a matte finish. The bright parts of the image are omitted from the print, leaving the brushed aluminum visible for a unique metallic sheen. The shimmering look of the textured surface produces an exciting contrast to the intensely vivid color and precise detail of the print. For certain photos, this is a very special look!

- Modern 7-color print directly onto the brushed aluminum panel
- Printed areas: matte surface without reflections
- White and bright areas: metallic look in gold or silver
